COVER LETTER

Dear Hiring Manager,

As a highly experienced computer literate individual, I find this opportunity to apply to work in your company as a developer and exploit my potential further. I find my qualifications effectively align with the company's requirements. I am a graduate with a Bachelor's Degree in Computer Science. I have years of working experience through an internship program and a volunteer practice. I believe that this is an excellent opportunity for me. I work effectively in both teamwork and self-directed settings. I also sparked and stepped into leadership positions during my internship and work practice.

Additionally, I believe my leadership skills, adaptability, hard work, and passion for web development make me the best candidate for this job. My experience will be valuable for your company because I can meet deadlines, follow orders and keep records. I often recommend teamwork skills and allow each team member a conducive environment to express their perspectives. I am conversant with the scripting languages and knowledgeable with coding.

My problem-solving skills and mastery of new technologies are my strengths. I don't let failure define me. I am an all-around positive person. Creativity and an innovative mind come with positivity, making me a great candidate for this position. My weakness is relentlessness while trying to build a website from scratch and not giving up despite the circumstance. I can develop a website from the ground up as instructed by my superiors. Since education is progressive, I will keep learning new skills even after employment.

Please review my resume for more additional information.

Thank you for being considerate.

Sincerely,
RajKimar Gaddam
